

One day training on

# **HACCP**

*May 26, 2017*

Organized by

**National Centre for Quality Management, Mumbai**

## **Perspective**

HACCP provides an effective tool to develop procedures to manage the risk posed by physical, chemical and biological hazards which affect food production. Using HACCP principles, critical stages in the production of a food product are identified, managed and monitored. HACCP system consists of seven principles, which outline how to establish and maintain a plan for operation & control of food safety in its processing and supply chain. These principles are internationally accepted and published by CAC (Codex Alimentarius Commission) which are also recognized by WTO. Though food products have always been a topic of interest to the public, there is an increase in demand for safe food due to the expanding global economy and the international trading of food products. The spreading competitive global markets for the food industries and its suppliers require all nations to produce, distribute, consume and regulate safe foods.

## **METHODOLOGY :**

Interactive discussions, questions & answer session, sharing of experiences and exercises relating to flow diagram, hazard analysis and use of logic tools for CCP determination.

## **Coverage**

- Need for Food Safety & Safe Food.
- Pre-requisite Programmes – GMPs / SSOPs and Supporting Procedures.
